MANUAL DE INSTALACION Y CONFIGURACION

INTEGRANTES

LORENA VALLEJO

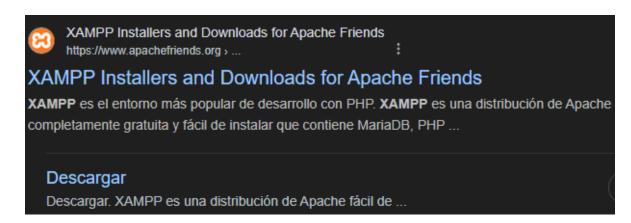

VALENTINA VASQUEZ

LAURA DIAZ

LUISA CASTILLO

1. instalación del xampp

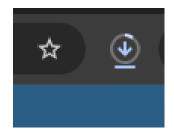

Buscamos xampp en el navegador.

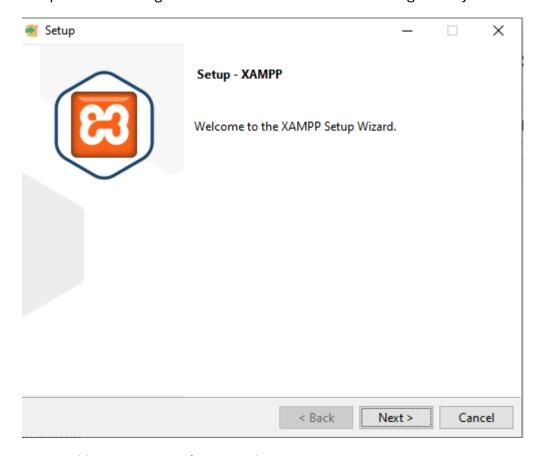

Entramos al primer link y escogemos la opción del sistema operativo que estemos usando, en este caso Windows

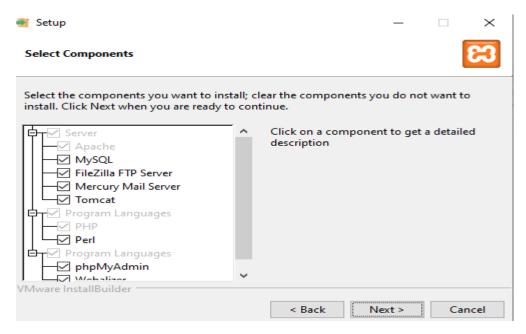

Automáticamente se inicia la descarga

Después de descargarse se abre una ventana como la siguiente y damos next

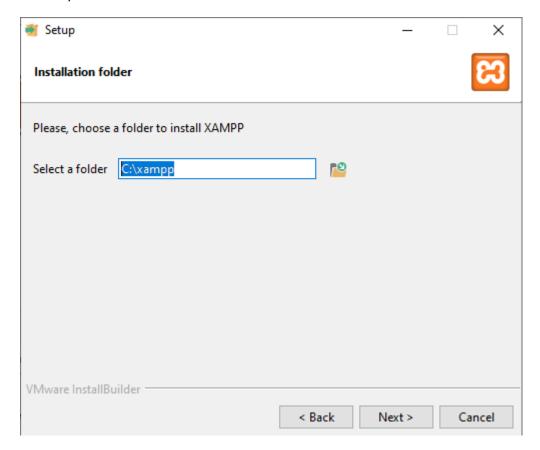

No modificamos los parámetros simplemente next a todo

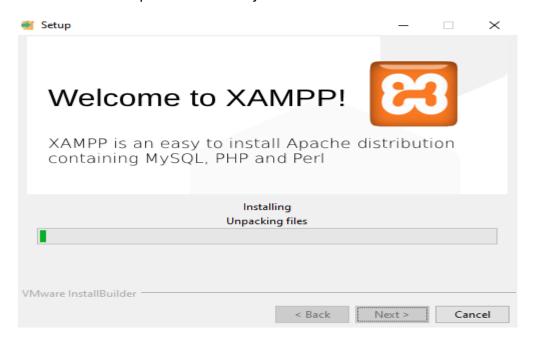

Dejamos la ruta por defecto

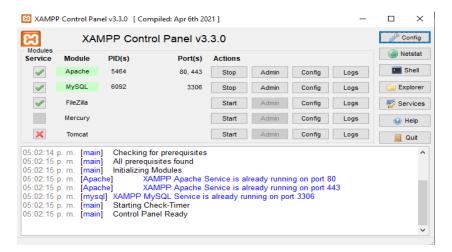

la ruta por defecto

Damos next a los pasos restantes y comienza la instalación.

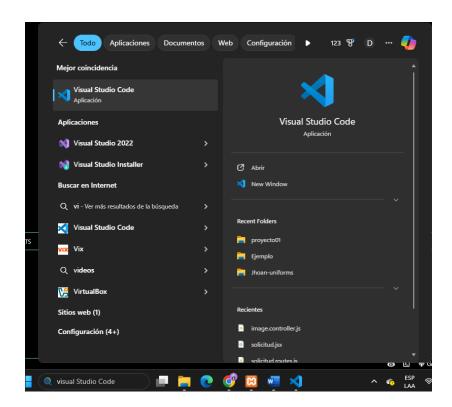

Después de la instalación abrimos xampp y verificamos que los dos puertos necesarios estén funcionando correctamente.

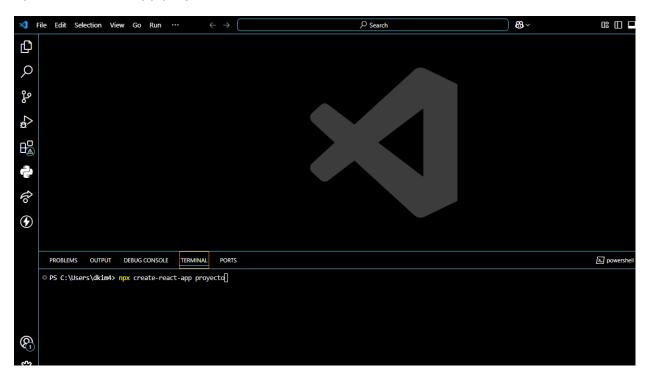

2. Configuración de Visual Studio

Se crea un nuevo proyecto en react para la elaboración del frontend y backend

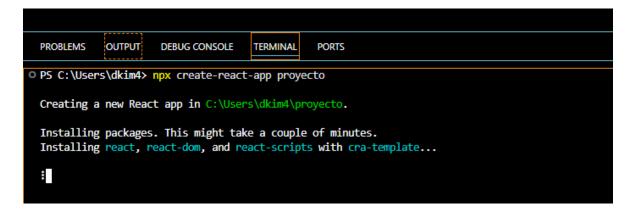

. Se busca en el navegador visual studio code y abrimos la aplicación si no tiene visual studio ingrese a la siguiente URL https://code.visualstudio.com/

Abrimos una nueva terminal con ctrl ñ y digitamos el siguiente comando npx create-react-app proyecto

Debe de aparecer lo siguiente esto especifica que el proyecto se está creando

Si todo salió correcto debe de salir así

```
Success! Created proyecto at C:\Users\dkim4\proyecto
Inside that directory, you can run several commands:

npm start
Starts the development server.

npm run build
Bundles the app into static files for production.

npm test
Starts the test runner.

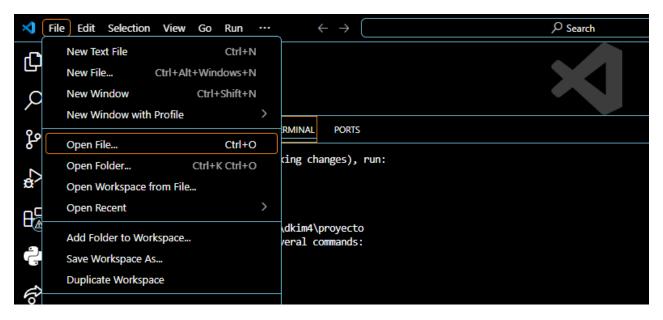

npm run eject
Removes this tool and copies build dependencies, configuration files and scripts into the app directory. If you do this, you can't go back!

We suggest that you begin by typing:

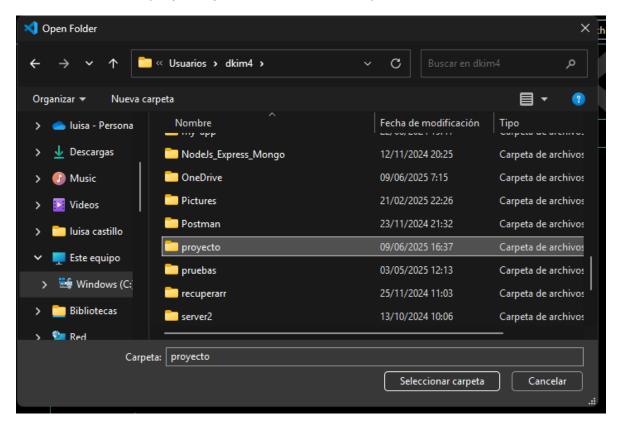

cd proyecto
npm start

Happy hacking!
PS C:\Users\dkim4>
```

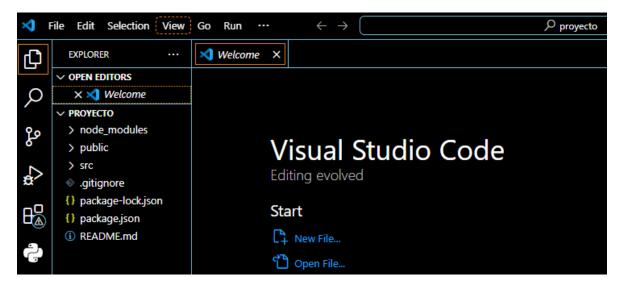

Nos vamos a file y nos vamos a open folder

Buscamos nuestro proyecto y seleccionamos la carpeta

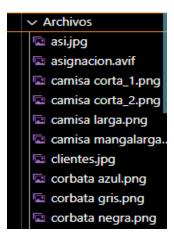

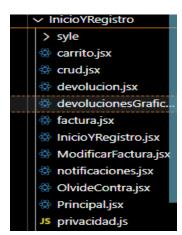

Si nos damos de cuenta así debe de aparecer nuestro proyecto y ya empezaríamos a crear los archivos y carpetas

En el src se crearan dos carpetas llamadas Archivos y InicioYRegisto donde en la de achivos contendrán las imágenes y la de InicioYRegistro los archivos para el proyecto

En el archivo App.js se establecerán las rutas para los archivos Esto nos dará acceso para navegar a las paginas

```

Abrimos una nueva terminar para ejecutar nuestro proyecto con npm start

Si todo salió correcto nos debe de aparecer así nuestra pagina

Para el backen se crean los siguientes servicios

Npm install cors

```
PS C:\Users\dkim4\proyecto\imagenes> npm install cors

up to date, audited 219 packages in 5s

25 packages are looking for funding
 run `npm fund` for details

found 0 vulnerabilities
```

Npm install express

```
    PS C:\Users\dkim4\proyecto\imagenes> npm install express
    up to date, audited 219 packages in 5s
    25 packages are looking for funding run `npm fund` for details
    found 0 vulnerabilities
```

Npm install mysql

```
PS C:\Users\dkim4\proyecto\imagenes> npm install mysql
up to date, audited 219 packages in 4s
25 packages are looking for funding
run `npm fund` for details
found 0 vulnerabilities
```

Npm install mysql2

```
    PS C:\Users\dkim4\proyecto\imagenes> npm install mysql2
    changed 1 package, and audited 219 packages in 5s
    25 packages are looking for funding run `npm fund` for details
    found 0 vulnerabilities
```

Npm install nodemailer

```
    PS C:\Users\dkim4\proyecto\imagenes> npm install nodemailer
up to date, audited 219 packages in 4s
    25 packages are looking for funding
    run `npm fund` for details
    found 0 vulnerabilities
```

Npm install Morgan

```
    PS C:\Users\dkim4\proyecto\imagenes> npm install morgan added 6 packages, and audited 225 packages in 4s
